

## CLAIMS

1. A battery package comprising: a base having a print surface and comprising biodegradable aliphatic polyester; a laminate layer comprising biodegradable aliphatic polyester and being arranged on the print surface of said base with the intervention of an adhesive layer; and a container comprising biodegradable aliphatic polyester and being arranged on said laminate layer, wherein said laminate layer is 20 to 80  $\mu\text{m}$  in thickness.

2. The battery case in accordance with claim 1, wherein said biodegradable aliphatic polyester is a polylactic polymer.

3. The battery package in accordance with claim 1, wherein said container is molded from an oriented sheet of biodegradable aliphatic polyester.

4. The battery package in accordance with claim 1, wherein said adhesive layer is made of a biodegradable adhesive.

5. The battery package in accordance with claim 1, wherein said container is 200 to 600  $\mu\text{m}$  in thickness.

6. The battery package in accordance with claim 1, wherein said container holds a plurality of batteries wrapped in a shrink pack.

7. The battery package in accordance with claim 6, wherein said shrink pack comprises biodegradable aliphatic

polyester.

8. The battery package in accordance with claim 7, wherein said biodegradable aliphatic polyester is a polylactic polymer.

9. The battery package in accordance with claim 8, wherein said shrink pack comprises an oriented sheet of biodegradable aliphatic polyester.
